POSI-JOISTS

THE ALTERNATIVE JOIST SYSTEM

You simply can't afford to ignore the advantages of the Posi-Joist system.

Posi-Joist combines the lightness of timber with the strength of the Posi-Strut steel web to form the most versatile open web system available to the modern building designer.

With greater spans and design flexibility the Posi-Joist gives you unequalled design freedom across a wide range of applications for both floor and roof in domestic, industrial and commercial structures.

With the all-important need for MVHR (Mechanical Ventilation & Heat Recovery) systems the Posi-Joist provides a perfect and simple solution not possible with alternative solid timber products.

The benefits of installing this flooring system are:

- **Open web design provides easy access for the design and installation of services**
- **Improved quality of service fitting, eliminating costly remedial work**
- **Engineered and manufactured to consistent standards of quality and reliability**
- **Greater clear spans for design flexibility**
- **Lightweight, strong and stable, making installation easy and fast**
- **Clear profit from savings in labour, time, materials and call-backs**
- **Standard depths of 196, 219, 247, 298, 367 and 415mm.**
